

2.NP

The diagram illustrates a 2.NP (Second Normal Form) table structure. It shows three horizontal lines representing data rows. The top row has a primary key 'ID' (underlined) and a foreign key 'FK' (dashed line). The middle row has a primary key 'ID' (underlined) and a foreign key 'FK' (dashed line). The bottom row has a primary key 'ID' (underlined) and a foreign key 'FK' (dashed line). The diagram illustrates how a table can be decomposed into smaller tables to eliminate transitive dependencies.
